As you can see the database has a'messages' node which has a 'body' node under each message. Each message contains the name of a user, which is how I want to retrieve the items in my RecyclerView I was wondering if there was a way to display the messages in a RecyclerView without using RecyclerView.Adapter or RecyclerView.ViewHolder? I have researched this a lot but all the solutions I have seen have used these two classes. A: As you have mentioned that you have already a listener for this FirebaseDatabase. So, now we have to implement a listener to listen for the changes to occur for this database node. And in this listener, we can populate the messages in your recyclerview. For this, you have
