
HACK CodeGear RAD Studio 2007 Full (Delphi 2007) nikhyn

RAD Studio 2007 provides a comprehensive and easy-to-use integrated development environment (IDE) for developers of all skill levels. So if you already have an old Delphi you can upgrade your IDE too. The Delphi 7 IDE is also available for download from www.embarcadero.com Delphi - part 2 Today we continue with the previous topic about the Delphi - part 1. The first topic was about prerequisites. You can download the prerequisites from this link: [Delphi and C++](#) After installing the prerequisites you have to install the runtime environment to have the compiler and all support tools working together. Just follow the steps that are described in the following link: [Getting started](#) After you have installed the runtime environment, you can start to code. You can download the TDTestDemo project from the following link: [Once you've downloaded the TDTestDemo and you have installed the VCL, you can start to code.](#) You can download the source code from this link: [We will start with the form and objects wizard.](#) In the Form and Objects wizard you have an option to create a new project with the Delphi VCL. You can download the Embarcadero IDE Delphi 7 from this link: [The next steps are the same steps that I've already described in my previous articles about Delphi and C++.](#) The steps for creating a project are the following: 1. Choose new project in the new projects dialog. 2. Choose Delphi VCL project. 3. Set the project type to VCL application. 4. Choose the type of project. If you have chosen Delphi application, you have to set the package, module name and the name of the package and project. 5. You can select the installation directory or set it automatically (usually the installation directory is not a good choice). 6. The next step is the selected form. 7. Choose the Form or the Form is created automatically. 8. The next step is the components. 9. Choose the components that you want to include. The components include the following: 10. Choose the properties. 11. The next step is the classes. 12. You have to name your class for the form. 13. Choose the menu and toolbars. 14. The next
