
RM KLV 2000 User Manual RM

KLV 2000 Manual, Use and Information Manual The highly popular and versatile RM KLV 2000, is a 2-channel Class A Linear Amplifier designed to deliver crisp clean amplifier performance using high fidelity triode-class components throughout. This amplifier is designed to provide headroom for the most demanding uses, allowing the user to maintain exceptional sound quality at high volume levels. The KLV 2000 is a solid state audio-cathode follower amplifier with a true class A configuration. The "R" power pentode design provides a long life, high voltage output stage with two cathode follower circuits, in addition to being able to operate at the highest input levels. The KLV 2000 provides clear, spark free sound with excellent transient response. This amplifier is ideally suited for line level or low-level use, up to 25 wats of output into 8 Ohms. This is a faithful, faithful amplifier that will be a pleasure to use, perform and own. A simple, top loader design allows for a clean and secure unit. This amplifier is fully programmable via a user-friendly front panel interface, and includes a small onboard speaker. The front panel also offers a standard rear panel XLR power jack and "T" connector. There is also a balanced input jack. The KLV 2000 amplifier can be set up to have either half-power or full power for both channels. Each channel is provided with individual volume controls, power switch, programmable PWM, and a speaker output level control. The programmable PWM feature allows the user to program the power output to a more desirable level, or turn the power down to a lower level if desired. The KLV 2000 comes with a one year manufacturer warranty. The upgrade kit for the KLV 2000 is also available, and contains all the parts needed to upgrade the KLV 2000 to a three channel amplifier. This kit includes an audio transformer and power transformer. Power Transformer: 750 v, 2700 ohm, 22 uH (KLV 2000 Model only) For your convenience, the optional RM KLV 2000 "TV" version has additional features and is equipped with an integrated audio preamplifier. These options include: 1,000 ohm speaker output, "TV" mode, remote power switch, RF and ATSC tuner. The unit has a 5mm 1/4" input for headphones and another input jack for recording from tape deck or CD player. The KLV 2000 amplifier is packaged in a metal enclosure that can be fixed
