KeyMACRO is a program that allows you to assign keyboard shortcuts to commonly used functions. The program provides convenient keyboard shortcuts for files, the most frequently used applications, and the system. KEYMACRO, like many other similar programs, can be used to make Mac OS X functions and commands more accessible with a keyboard. You can assign keyboard shortcuts to various Mac OS X functions and commands. You can even assign keyboard shortcuts to folders and file types, thus enabling you to perform various operations more quickly. KEYMACRO can also help you organize your desktop. You can arrange your open programs, documents, and folders in a view that works for you. You can select which items to display on your desktop as well. You can also easily copy, move, or delete items with just a few keyboard shortcuts. Select any of the following from the TOP menu, then assign a keyboard shortcut to that function or command. • Start / Open (by clicking on the icon at the top of your screen) • Quit (by clicking on the X in the upper right corner) • Switch or Reopen applications (by pressing the Application key on your keyboard, then double clicking the icon of the program you want to switch to) • Quit the active application (by pressing the Command-Q key on your keyboard) • Quit and save (by clicking on the "Save" icon on the top left corner) • Quit and Open (by pressing the Command-O key on your keyboard) • Quit and Reopen last opened document (by pressing the Command-Return key on your keyboard) • Quit and Open this document (by pressing the Command-R key on your keyboard) • Quit and Open previous document (by pressing the Command-Y key on your keyboard) • Quit and Open next document (by pressing the Command-U key on your keyboard) • Quit and Open previous document (by pressing the Command-Shift-U key on your keyboard) • Quit and Open next document (by pressing the Command-Shift-Y key on your keyboard) • Quit and Open previous document (by pressing the Command-Shift-Return key on your keyboard) • Quit and Reopen previous document (by pressing the Command-Shift-O key on your keyboard) • Quit and Reopen next document (by pressing the Command-Shift-Return key on your keyboard) • Quit and Reopen last opened folder (by pressing the Command-Shift-L key on your keyboard) 70238732e0

In its current state, it is a small and simple software that collects keystrokes, mouse events and screenshots. The application can be used by any computer user to enable remote monitor of keystrokes typed, mouse actions and screenshots taken.KEYMACRO is designed to be highly configurable and extensible. It can collect screenshots, any keystrokes and mouse actions, mouse movements and size of windows, any online/offline timer/settings, activity tracker, clipboard history, clipboard history with keywords and clipboard history with timestamps. Using the Keymacro application is fairly simple: - You install the software on your machine or computer. - Open the program. - Log in as a user account with administrative permissions. - Start monitoring remote computer with Keymacro. - Type any text or take any screenshot. - Enjoy the benefits of Keymacro! - Close the application when you're done. Keymacro is currently built on a technology called WinJump. WinJump is a free, open-source, standalone implementation of the advanced Remote Control feature

introduced in Windows Vista. Keymacro is free software that you can run, study, modify and share. The Keymacro project code is open-source and freely available under the MIT license. What's new in Keymacro 1.8.3: - Bugfixes and improvements. Keymacro is a simple and easy to use program that enables you to record keystrokes, mouse actions and screenshots and then transmit that data to your PC from a remote computer, enabling you to see what your users have been doing over the past few hours. Keymacro also enables you to record video of any window on the remote computer. Using an app that costs over $100 to spy on people's activities is un-ethical and this app proves that. So you can keep this kind of software on your phone and try to fool your employer/boss in this way. I would never use something like this to spy on people's activities, I would never be able to hide it from my employer because he would notice it immediately. So I am not even going to use it, because it's unethical and I can't just download it from an app store, no, I would have to get it from a website. A: Honeypot is an app that can be easily installed on a Android phone. It is targeted at law enforcement, so for them it serves as an
