The machine allegedly involved has the code named "Hotcar", a single cylinder, air cooled, side valve V8 engine which shares much of its design with the US-market version of the Holden VE Commodore. However, a high pressure supercharger unit and single mass flywheel are used on the Australian model. The engine is said to produce 500bhp and produce a massive 640Nm of torque at 2600rpm, putting the engine in a position to easily match the local 12,500rpm redline. "The US-based Hotcar engine was used in the TVR factory racer until the contract was sold to TVR motorsport division and the capacity reduced to produce around 300bhp for the homologation requirements," said chief engineer Patrick Morrirt. "The car is rumoured to produce a similar output but has been built for UK road use. "The first thing we did was get hold of a brand new 12.9 litre supercharged engine, remove the old one and rebuild it using the latest technology. "It also has all the electronic control systems from the V8 engine for improved performance. "We are still building it up and it will take a year or two to build the car and run it on public roads." How much faster is it? Although many details are still up in the air, there is at least some idea of what the
