I am trying to use a react app that was created with create-react-app. I can't find a way to export the app from the create-react-app to use as a variable, so that I can pass it to webpack for the template. Normally, I'd do something like this: `npm i -S react-scripts create-react-app react-scripts create-react-app my-app export { default as App };` And then in my `webpack.config.js` I'd have: `module.exports = {`
