CmdOption [Mac/Win]

Provides you with the tools to easily and quickly develop command line applications and configure them. Usage:
To Run `c:\> java -jar c:/CmdOption Cracked 2022 Latest Version-1.0.jar --help`
Configuration: The

CmdOption application can be configured using annotations.

Configuration is done by using the configuration XML files. A

configuration file can contain any combination of the following: *

ExecutableOptions which contain options for the executable to run. *

ConfigurableOption which contain options that can be changed using annotations. *

AdditionalOptions
which contains options
that should be
configured before
running the executable.

* Input-TextOption
which contains input
text for the user. The
input text is written to
the standard output
stream of the
application. * Output-
TextOption which
contains output text for
the user. The output text
is written to the standard
error stream of the

application. Executable
options: *

ExecutableOptions can
be specified using the
options attribute. The
type of the options can
be a string, an enum, a
Class or an array.

Example: /* @
options="A text option"
/ */ The following
examples demonstrate
how to configure
c:/cmdoption-1.0.jar
using XML files. First,
you should create a
configuration file called

c:/cmdoption-1.0.cfg.

Add the following
content:

c:\java\jdk1.5.0_04\bin

Input text string Then
run the CmdOption
program with the
configuration file using
the command line
option: c:\> java -jar
c:/cmdoption-1.0.jar
--config-file
c:/cmdoption-1.0.cfg

The following options
can be configured using
annotations: * Output-
TextOption: * Name *

Description * Key *
Type * Default * Min *
Max * Value Example:
/* @ name="input-text"
@ default="Input text"
@ min="1" @
max="100000000" @
key="output-text" @
type="string" */ * Input-
