Twitter CEO Jack Dorsey made a special announcement on Twitter today in preparation for the launch of the new version of Twitter, a product that many of us already use, but know is at times clunky and difficult to navigate. The new version, which he says is "the biggest upgrade in Twitter's 14 year history," will be available on iOS, Android, the web and the Apple TV starting today. Dorsey's announcement comes days after we learned that Twitter had laid off 300 employees in its product division, some of whom are working on the company's video streaming service Twitter TV. However, it has been rumored that, even with these layoffs, Twitter is losing more than $1 billion in the past 12 months. In an attempt to save money, Dorsey has also reportedly ordered the company to drop new features like friend suggestions and notifications in order to appease shareholders. In his announcement today, Dorsey explained that Twitter TV will be available on iOS in the fall, and that it will be capable of live-streaming television, as well as live sports, politics, and other content. Other new features include a conversational timeline that Dorsey says will let users share the most important information from a moment in time, rather than the most recent, and a new emoji option for messages. "They will add a new dimension to the way we communicate, and allow us to be more personal. They will build upon the 140-character limit while also increasing the diversity of our emoji. We have a dedicated team developing emoji that more accurately reflect what's

happening in the world. It won't be a random collection. They will be curated
