SysInfoMyWork (2022)

SysInfoMyWork is a lightweight Windows software tool developed to monitor memory and CPU usage. As compared to other similar products that come with a dedicated interface and floating graphs to displays a bunch of stats, SysInfoMyWork's goodies are all available via the Tray icon. A simple double-click on this Tray icon opens the Windows Task Manager, while right-clicking it lets you access all the other features and details. For example, the icon can be configured to show free and used memory, but also to quickly optimize the memory and thus boost computer performance. On the other hand, hitting the "Information" option brings up a balloon notification showing details concerning both the RAM and the CPU, but you don't get more than basic info. The configuration screen is the one providing access to auto-optimization features, allowing you to set up SysInfoMyWork to free up memory all by itself. Additionally, this is the screen that holds main display, value and bar customization options, but again, it all comes down to a few basic parameters. The application works smoothly on all Windows versions and doesn't hamper system performance in any way. It doesn't need administrator privileges and it cannot be configured to run at Windows startup. Overall, SysInfoMyWork is an interesting project, but further improvements are clearly needed. It makes for a decent app that has a bit of everything, although it fails to impress when it comes to almost every single feature. Auto-optimization is just basic, while customization options are very limited. SysInfoMyWork User reviews Have you ever been looking for a software that monitor memory usage and CPU usage? SysInfoMyWork Review by Goonpaz SysInfoMyWork Review by cyberfook SysInfoMyWork Review by anziraq SysInfoMyWork Review by itnqt Have you ever been looking for a software that monitor memory usage and CPU usage? SysInfoMyWork Review by Goonpaz SysInfoMyWork Review by cyberfook SysInfoMyWork Review by anziraq SysInfoMyWork Review by itnqt This system monitor software is really good SysInfoMyWork Review by Jypar My system was running very slow and in panic due to which i checked my ram ram usage my
