The Immigrants: Historical Roots of the American People (Thomas Ammons Jamaica Bob – I Need You Mp3 Top Free Books Report backlinks » Add to This Compete with us: About Michael Michael is a Google Analytics Certified Partner and the owner of DistilledTracks. He has over 15 years of marketing and analytics experience, and has held positions as a consultant, agency owner, in-house SEO, and content marketing specialist.In an electrophotographic image forming apparatus, it is known to provide process cartridges which includes an image bearing member and a developing member that is used to develop latent images formed on the image bearing member using toner particles stored in a toner container. In a process cartridge which may be used in such an image forming apparatus, it is known to provide a toner supply hole that extends between the bottom and the top of the cartridge. As a cartridge is filled with toner, additional toner may pass the toner supply hole from the top of the cartridge to the bottom. In addition, image forming apparatus may be equipped with a toner supply roller that supplies toner to the developing member of a process cartridge from a toner supply opening in the image forming apparatus. However, such toner supply openings may reduce the robustness of the image forming apparatus, such as by contributing to the penetration of water into the image forming apparatus. Also, a toner supply opening may complicate the assembly of the image forming apparatus. In an image forming apparatus, it may be desirable to extend the life of the process cartridge. Such extended life may be particularly desirable in a color image forming apparatus, as multiple color images may be formed on a single image bearing member. However, as the toner in the process cartridge may be used in a single color, such extended life may be difficult to achieve. Therefore, it may be advantageous to extend the life of the process cartridge even when toner is used in a single color. The toner may be dry when stored in the process cartridge, but may be mixed with moisture when removed from the process cartridge. In addition, wet toner may be unsuitable for use in an image forming apparatus. Therefore, it may be advantageous to perform a drying operation on the wet toner in a process cartridge so as to remove moisture from the toner. Thus, an image forming apparatus which may provide extended life to a process cartridge that may be used in the image f30f4ceada
