AutoCAD 360° 3D is the successor to Autodesk 3DS Max. It is one of the 3D modeling software owned by Autodesk. AutoCAD Project management AutoCAD Project Management is a management tool used to keep track of changes to drawings in an AutoCAD project. It organizes the tasks into project levels, each one with its own priority. It assigns a status to each task, and provides a way to view and manage the tasks. It can be used as a standalone application or integrated with AutoCAD. It is usually part of a larger CAD package like Autodesk BIM 360 and can be installed as a standalone application. History Early history AutoCAD was created as a word processor for engineers, and was named Centura CAD. It was intended to be an implementation of a prototype word processor developed at the MIT Auto-Graphics Lab by Alexander K. Ganin, which was later built on by a team at Digital Equipment Corporation (DEC) in the late 1970s, eventually becoming the first practical non-proprietary CAD system. The name "AutoCAD" was chosen in 1981. The initials are for Auto-Cad, an initialism for "Automatic Computer-Aided Design", and the first letter was intentionally capitalized.
