
I got a 3500 from 50 for new \$10k fine just paid \$5000 by text they owe you a lot of money been getting it for a couple yrs nothing has done about it. The only time it stops is when you ask them about it. I don't know any other way around that honestly lol Try contacting them via the form below it's easier for them to go through a form rather than a mass email. Customer care numbers on the box are a bit of a nuisance. I use the form below via whatsapp though.

SeriousSam4PlanetBadassAtivadordownloadhacked Hey my name is SeriousSam4Planet BadassAtivadordownloadhacked have a look at some of the games I have included in this post some of them might interest you. pctdibeter's Ownd SeriousSam4PlanetBadassAtivadordownloadhacked

And maybe you could add your game lists on the forums so I could see what games people are interested in. ThanksQ: How to check if a certain value has been changed or not in vuejs v-model? How to check if a certain value has been changed or not in vuejs v-model? I want to change a certain attribute if I change this.name. I know that i can do this with v-bind but I dont really want to do it this way. So basically I want to prevent you from entering the name again. Do you know if this is possible? A: Although you could use v-bind to do something like this, I think the way to go is to bind the input value to a computed property which checks that name is the same as the existing value, and if not, emits an event to update the value. Here's a sample: `new Vue({ el: '#app', data: { name: '' }, computed: { nameNotEntered () { return this.name!== this.`
